Summary

Front-end engineer with 4+ years of experience building scalable, performance-focused web applications using **React**, **Javascript**, **Angular**, **TypeScript** and modern UI libraries. Strong background in enterprise banking systems, fintech workflows, access control systems, and IoT platforms. Experienced in migration projects, reverse engineering legacy code, component-driven development, and collaborating closely with backend, QA, and product teams to deliver high-quality releases under tight timelines.

Technical Skills

Frontend: React, Redux, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, Material UI, Responsive Design

Backend: Node.js

Databases: PostgreSQL, Cassandra

Messaging: RabbitMQ, MQTT

Testing: Jest, Jasmine

Tools: Git, Postman, Jira, Bitbucket, Agile, WebSockets

Other: SpreadJS, RBAC, REST APIs, Unit Testing

Work Experience

Senior Associate Consultant

Infosys, Bangalore

2024 – Present

Tech: React, TypeScript, Material UI, Redux, Jest, Agile

- Front-end developer in a major modernization program converting legacy mainframe applications into a modern **React-based banking platform**.
- Implemented intuitive and accessible UI components using **Material UI**, based on BA wireframes.
- Streamlined development by building reusable components, improving delivery speed across modules.
- Collaborated with backend, BA, and QA teams to ensure seamless integration, stable releases, and clarity in requirements.
- Utilized Generative AI tools to accelerate analysis and improve development efficiency.
- Successfully completed multiple UI migration modules under strict delivery timelines.

Software Engineer

Experion Technologies, Thiruvananthapuram

2021 – 2024

Tech: React, TypeScript, Angular, Node.js, MQTT, RabbitMQ, Cassandra, PostgreSQL, WebSockets

- Built scalable front-end applications for IoT, fintech, construction-estimation systems, and access control systems using **React** and **Angular**.
- Integrated REST APIs and implemented responsive UI designs across multiple production applications.
- Collaborated closely with backend teams to define data contracts and workflows for financial systems and IoT dashboards.
- Improved UI performance and user experience by optimizing component rendering and maintaining clean, modular architectures.
- Switched to **Angular** for the Darisni project and ramped up quickly, contributing effectively within a short time.
- Applied strong **OOP concepts** (including inheritance and component abstraction) to improve code reusability and maintainability in the Angular project.
- Worked as a **full-stack developer** on the Street Light Management System, taking ownership of backend logic and designing suitable solutions for real-time IoT workflows.

Projects

Banking Applications (NACHA, Fund Maintenance, Tax Withholding)

React — Material UI — Redux — RBAC — Unit Testing — Reverse Engineering

- Delivered **three complete production applications** during a modernization initiative, replacing legacy systems with new React apps.
- Performed **reverse engineering of legacy code** (with assistance from AI tools) to clarify complex business logic where documentation was insufficient.
- Developed reusable UI components and optimized data workflows for faster client interactions.
- Implemented **RBAC (Role-Based Access Control)** ensuring secure and permission-driven feature access.
- Wrote and maintained **unit tests** to ensure reliability and minimize regressions.
- Worked closely with backend and QA teams to ensure functional completeness and smooth integration.

Limbach – Project Versioning & Estimation System (Angular)

Angular — TypeScript — Jest — SpreadJS

- Implemented complex data manipulations and spreadsheet-like visualizations using **SpreadJS**.
- Built locking mechanisms to prevent data corruption in shared editing workflows.
- Wrote and maintained unit tests using Jest.

Darisni – EdTech Learning Platform (Angular)

Angular — TypeScript — Jira — Bitbucket

- Contributed to a **large and complex Angular codebase**, quickly becoming productive despite minimal documentation.
- Implemented highly responsive UIs, building both **mobile views and web views** to support a wide range of devices.
- Added support for **Right-to-Left (RTL)** layouts for Gulf-region users, ensuring proper styling and seamless language switching.
- Integrated REST APIs, implemented responsive UI layouts, and improved UX consistency across multiple modules.
- Collaborated closely with designers to refine UI flows and maintain quality across the platform.

Hydra – Access Management & Security Tool

React — JavaScript — Redux — WebSockets

- Built a complete access management tool from scratch using React.
- Implemented real-time UI updates using **WebSockets**.
- Improved security through robust authentication and authorization flows.
- Collaborated closely with QA to maintain high application quality.

Street Light Management System (IoT Platform)

React — TypeScript — IoT — RabbitMQ — MQTT — Node.js — PostgreSQL — Cassandra

- Developed a real-time monitoring dashboard for controlling IoT-enabled street lights.
- Built responsive UI components for map-based monitoring and control.
- Ensured smooth data flow by integrating front-end with RabbitMQ/MQTT pipelines.
- Improved reliability through robust error handling and data integrity checks (Cassandra).

Certifications

- React.js Essential Training – *LinkedIn Learning*
- Learning TypeScript – *LinkedIn Learning*
- Node.js Essential Training – *LinkedIn Learning*
- Programming Foundations: Fundamentals – *LinkedIn Learning*

Education

B.Tech in Electrical and Electronics Engineering (Honours)

Govt Engineering College RIT, Kottayam (APJ Abdul Kalam Technological University) *2017 – 2021*
CGPA: 8.54
